Product Number: 32

Intumescent Downlighter Covers

INTUMESCENT DOWNLIGHTER COVERS
STEP-BY-STEP FITTING INSTRUCTIONS
FOR DOWNLIGHTER COVERS IN PLASTERBOARD CEILINGS

1. Load the cable from the transformer through the previously-cut downlighter fitting aperture.
2. Pierce the side cable entry point with a sharp object to suit the cable size and feed sufficient cable through this hole for the connection.
3. Compress the cover to fit into the opening and push it into ceiling void. Maintain contact.
4. Use the two supplied pins to fasten two opposite inner flanges of the cover to the plasterboard.
5. Use a hammer/screwdriver handle to open out the cover material away from the light fitting.
6. Insert the light fitting into the hole and allow the clips to tassel over the inner flaps of the cover. The fitting is now protected by a secure cover.

IMPORTANT

PLEASE ENSURE THAT ANY FITTED CEILING INSULATION MATERIAL DOES NOT COMPRESS THE LIGHTING COVER
