

### Product Number: 50

### Intumescent Letterbox Liner

#### Description:

An intumescent liner comprising two L-shaped sections fitted with self-adhesive backing tape for ease of fixing. The liner can be cut to size with a sharp knife to fit the opening. Sizes to suit other openings can be made to order. For mail apertures in fire doors, where existing letter flaps are to be used. Aperture sizes up to the limit for each type (LBL1 and LBL2) can be accommodated by cutting the liner with a sharp knife as required. A bare wood aperture must be sealed with paint or wood sealer before fixing the liner. Suitable for fitting to doors from 38mm to 70mm thick.

The Intumescent Liner for Mail Apertures is available in two standard sizes:

<u>Reference</u>	<u>Overall Size</u>
LBL1	85 x 340mm
LBL2	65 x 290mm

(Special sizes made to order)

#### Application:

The product is supplied in 4 pieces, 2 long lengths for the top and bottom, and 2 shorter lengths for each side of the letterbox opening. Each small section is attached to the large section using DST (double sided tape).

Place the long sections on top of the side sections to form an L-shape liner, and cut the ends to the required size to suit the opening. Peel of the DST (double sided tape) and adhere to the inside of the letterbox opening. Use panel pins supplied to secure both side sections to the letterbox opening.
