Soffit Board Intumescent Ventilator

Description:

Intumescent metal ventilation grilles to fit new, or to replace plastic ventilation grilles, designed to prevent external flames from entering the roof space and spreading fire.

Use:

The vents fit into existing vent openings and seal up in a fire, stopping flames and hot gasses reaching any loft areas. An important precaution in case of fire in the lower rooms of a building where the windows have blown out or been left open. Absolutely essential in loft conversions and for use over windows in the dining room, kitchen and lounge.

Application:

Rectangular grille – push recess into opening in soffit board and secure in place. Available 72mm x 215mm overall to suit 47mm x 215mm opening. (Other sizes can be made to suit – prices on request)

Circular grille – push recess into opening in soffit board. Available 82mm diameter overall to suit 68mm hole diameter. (Other sizes can be made to suit – prices on request)
