

Product Number: 97

Intumescent Door Stop for Fire & Smoke Protection

Description:

A brown or white plastic door stop including intumescent fire seal and brush or rubber smoke seal, designed to upgrade normal hollow-core doors and to replace existing wooden door stops. Can be fitted with acoustic seals which also serve as draught and smoke seals.

Application:

Remove the backing from the self-adhesive strip on the back edge of the seal, then position and finish with the panel pins supplied.

Can be used for new installations, as a combined surface-mounted doorstop, brush smoke seal and intumescent fire seal. Alternatively the intumescent section can be routed into the door frame lining, with a rebate of 3mm deep x 50mm wide. The standard smoke seal supplied is a 5mm brush. Rubber seals may also be used (see technical data sheet.) This product should be fitted to the most vulnerable doors (including non-fire-rated doors) such as dining room and kitchen. The smoke seal helps to ensure a fire escape route free from smoke and the intumescent seals the gap between the door and frame to inhibit the spread of fire.
