ENVIROGRAF®

AP128-11-2019

Product Number: 128 Fire Break Membrane

Description:

A foil-clad, waterproof intumescent membrane reinforced with wire mesh with 30mm fireproof sponge seal section. Supplied as a ready-to-install unit.

Use:

Fitted to form a fire break between two roofs of adjoining properties. For use under roofing tiles and slates. Easily fitted with clout nails to roof trusses.

Application:

The membrane fits directly above the firewall structure. Roofing felt is fitted over the blanket section and roofing battens but to the raised (sponge) seal section. The raised seal section of the membrane is designed to fit directly below all types of roofing profiles. Tile joints can be made directly above the raised section or away from this area.

When ordering this item you will need to state the width required and height between the top side of the wall and underside of the slates or tiles. Please refer to the price list for guide to the measurements required.
