Suspended Ceiling Barrier

Application

Ceiling Barrier can be easily fitted onto existing suspended ceilings by simply removing the tiles one by one and laying the board on top of them, ensuring a snug fit between the tees.

When down lights or air conditioning units are present, order a tile in conjunction with down lighter cover (Product 32) or air conditioning unit cover (Product 31). They will be supplied as complete units for easy installation. **Make sure to state the position of these covers during ordering.**
